Fundamentals of Antenna Design

T. A. Milligan

Table of Contents

Chapter 1. Introduction

Electric Field	2
Voltage	2
Electric Flux Density	3
Magnetic Field	4
Magnetic Flux Density	4
Time Varying Fields	6
Inductance	7
Displacement Current	8
Radiation	10
Electromagnetic Field	13
Mathematical Review	15
Decibels	15
Phasor	16
Impedance	18
Phasor Operations	19
Retarded Potential	21
Antenna Radiation	22
Superposition	23

Chapter 2. Antenna Properties

Spherical Coordinates	25
Generalized Curvilinear Coordinates	27
Poynting Vector	29
Spherical Waves	29

Table of Contents

Radiation Intensity	31
Antenna Pattern	31
Incremental Dipole Pattern	32
Pattern Scales	32
Directivity	34
Directivity Estimates	35
Beamwidth	35
Kraus Method	35
Conical Beam Method	36
Concial Beam Dipole Method	36
Butterfly Patterns	40
Dipole Patterns	43
Unequal Beamwidths	43
Gain	46
Effective Area	47
Path Loss	47
Why Use an Antenna?	51
Reciprocity	52
 Chapter 3. Polarization	 54
Circular Polarization	57
Circular Polarization Components	58
Relationship Between X-Y Bases and Circular Bases	60
Axial Ratio	61
Antenna Response	63
General Orthogonal Polarization Bases	65

Table of Contents

Chapter 4. Transmission Lines	68
Terminated Transmission Line	72
VSWR	74
Return Loss	74
Smith Chart	75
Chapter 5. Array of Point Sources	83
Addition of Fields	83
Radiation Approximation	83
Arrays of Two Antennas	84
Mutual Resistance	94
Endfire Array	100
Linear Array of N Elements	105
Hansen and Woodyard Endfire Array	107
Pattern Multiplication	107
Polar Diagram	107a
Linear Phased Array	107d
Space Arrays	111
Sidelobes and Nonuniform Amplitude Arrays	113
Continuous Arrays	117
Chapter 6. Radiation from Currents	120
Magnetic Vector Potential	120
Standing Waves	125
Sinusoidal Current Distribution	126
Radiated Power and Radiation Resistance	129
Gain (Directivity)	132
Offset Feed	136
Balanced Feed	138

Table of Contents

Baluns	139
Balanced - Unbalanced / Odd - Even Modes	141
Coaxial Baluns	141
Folded Balun	142
Sleeve or Bazooka Balun	143
Type II Sleeve Balun	143
Split Coax Balun	144
Half-wave Balun	145
Candelabra Balun	146
Ferrite Core Baluns	147
Bazooka Balun	147
One to one	147
Four to one Series - Parallel	148
Transformer	149
Slit Tapered Coax Balun	149
Shunt Feeding	151
Currents over Ground Plane	152
Boundary Conditions	152
Images	154
Monopoles	156
Dipoles over a Ground Plane	157
Vertical Dipole	157
Horizontal Dipole	158
Sleeve Antenna	163a
Traveling Wave Currents	164
Vee Antenna	167
Rhombic Antenna	171

Table of Contents

Chapter 7. Radiation from Magnetic Currents

Generalized Maxwell's Equations	172
Electric Vector Potential	173
Small Current Loop	174
Boundary Conditions	175
Slot Radiator	176
Radiated Power and Radiation Conductance	179
Gain (Directivity)	180
Babinet's Principle	182
Slots Radiating on one Side of Ground Plane	186
Parallel Plate Slot	188
Finite Ground Plane Effects	190
Radiation from Coax	191
Duality	196
Wide Slot	198
Radiation from Open Circuited Waveguide	200
Reflection of Waves	202
Rectangular Waveguide	203
Slots in Rectangular Waveguide	208

Chapter 8. Horns

Induction Theorem	211
Huygens Source	212
Properties of Huygens Source	214
Gain	216
Pattern Multiplication	217

Table of Contents

Rectangular Horn	217
Pattern	219
Gain (Directivity)	224
Optimum Rectangular Horn	229
TE and TM Modes	237
Rectangular Waveguide	239
Overmoded Horn	242
Box Horn	251
Circular Coordinates	256
Circular Waveguides	259
Circular Waveguide Horns	262
Cylindrical to Spherical Coordinates	264
Gain	269
Optimum	270
TM_{01} Mode	272
TE_{01} Mode	277
Excitation of Higher Order Circular Waveguide Modes	278
Circular Waveguide Slots	281
Corrugated Horn	284
Phase Center	284
Rectangular Corrugated Horn	293
Biconical Horn	296
Biconical Transmission Line Impedance	303

Table of Contents

Chapter 9. Mutual Impedance	307
Dipole Mutual Impedance	307
Slot Mutual Impedance	313
Folded Dipole	313
Parasitic Elements	315
Yagi-Uda Antenna	322
Resonant Loop	333
Quad Antenna	342
Loop Parasitic Element	345
Chapter 10. Traveling Wave Endfire Antennas	348
Generation of Traveling Waves	357
General Surface Wave Device	361
Dielectric Slab	364
Dielectric Slab on Ground Plane	376
Excitation of Dielectric Slab Guides	377
Slabs on Ground Planes	379
Corrugated Conductor	380
TE Fields	381
Parallel Strips	383
TE Modes	385
Excitation of Corrugated Conductor and Parallel Strips	387
Slab Surface Wave Results	388
Capture Efficiency	392
Cylindrical Surface Wave Structures	394
Dielectric Cylinder	394
TE Modes	394

Table of Contents

TM Modes	397
Hybrid Modes	398
Dielectric Rod Antenna	401
Radial Transmission Lines	404
TE Modes	404
TM Modes	406
Corrugated Cylindrical Conductor	409
TM ₀₁ Mode	409
HE ₁₁ Mode	412
Feeding Cylindrical Slow Wave Structures	416
Helical Antenna	417
Helical Modes	417
Normal Mode	418
Axial Mode	419
Feeding a Helical Antenna	421
Long Helical Antenna	428
 Chapter 11. Frequency Independent Antennas	 434
Archimedean Spiral	435
Equiangular Spiral	438
Feeding the Equiangular Spiral	445
Conical Log Spiral Antenna	447
Mode 2 Conical Log Spiral Antenna	453
Feeding Conical Log Spirals	456
Log Periodic Antennas	460
Log Periodic Dipole Antenna (LPDA)	461

Table of Contents

Phase Center	473
Elevation Angle	475
Arrays of LPDA	477
Analysis of LPDA	479
Feeding the LPDA	482
Log Periodic Antenna Types	485
Log Periodic Scale (Even Tempered)	493
Chapter 12. Microstrip Antennas	494
Continuous Strip Antenna	501
Feed Networks	509
Microstrip Transmission Line	511
Circularly Polarized Microstrip Patches	515
Hybrid Feed	515
Cross Feed	515
Branchline Hybrid Feed	516
Turnstile Antenna	519
Microstrip Patch Turnstile Antenna	523
Half Microstrip Patch	528

Table of Contents

Chapter 13. Apertures	
Radiation from Apertures	530
Fresnel and Fraunhofer Regions	531
Rectangular Aperture	535
Tapered Distributions	537
Triangular	537
Cosine	537
Cosine Squared	539
Cosine Squared on a Pedestal	539
Taylor	543
Linear Phase Taper	549
Circular Apertures	556
Parabolic ^N	556
Parabolic ^N on a Pedestal	558
Circular Taylor Distribution	563
Amplitude Taper and Phase Error Loss	569
Separable Distributions	571
Quadratic Phase Error	573
Circularly Symmetrical Distributions	576
Chapter 14. Reflector Antennas	580
Geometric Optics	580
Astigmatic Ray	581
Special Ray Types	582
Fermat's Principle	583
Ray Tracing	585

Table of Contents

Chapter 14. Reflector Antennas (cont.)

Parabolic Reflector	585
Aperture Distribution Losses	589
Phase Error Loss (efficiency)	592
Spillover Loss	592
Conical Beam Feed Losses	593
Phase Error and Defocusing	598
Relations between Beamwidths	601
Feed Cross Polarization Loss	606
Aperture Blockage	607
Alternate Gain Calculation Method	616
Feed Scanning	619
Beam Deviation Factor	620
Axial Defocusing	623
Physical Optics	629
Short Dipole Feed	632
Short Magnetic Dipole Feed	634
Huygens Source Feed	636
Feed Polarization	636
Reflections from Conic Sections	637
Dual Reflector Antennas	641
Aperture Blockage	644
Ray Tracing in Cassegrain Antenna	647
Equivalent Parabola	650
Equivalent Noise Temperature	650
Focal Plane	651
Reflector Tolerances	654

Table of Contents

Chapter 14. Reflector Antennas (cont.)	
Feed Mismatch due to Reflector	658
Offset Reflector	662
Spherical Reflector	665
Corrector Subreflector for Spherical Reflector	667
Shaped Reflectors	676
Cylindrical	678
Toroidal	679
Circularly Symmetric	682
Doubly Curved	696
Chapter 15. Geometric Theory of Diffraction	700
Geometric Optics of Antennas	703
Shadows	704
Geometric Optics	711
Reflections	714
Edge Diffraction	718
Wedge Diffraction Coefficients	724
E Plane Analysis of a Horn	731
Slope Diffraction	740
H Plane Analysis of a Horn	744
Corner Diffraction	748
Equivalent Currents	751
Diffraction from Curved Surfaces	753
Chapter 16. Array Synthesis	760
Schelkunoff's Unit Circle Method	760
Dolph Tchebyscheff Linear Array	769
Other Tchebyscheff Techniques	779

Table of Contents

Chapter 16. Array Synthesis (Cont.)

Zero Sampling of Continuous Distributions	787
Shaped Beam Methods	789
Fourier Series Method	793
Woodward-Lawson Sampling	803
